

Environmental Policy

At Hokkan Holdings Group, we are deeply aware that our corporate activities as container manufacturers, filling companies, and machinery producers depend on the natural blessings of the irreplaceable planet we inhabit. We are committed to making a proactive contribution to solving the social issues of protecting and sustaining the global environment.

Basic Policy

1. Measures to tackle climate change

We will take positive steps to address the challenge of climate change, with the aim of achieving carbon neutrality in our greenhouse gas emissions by 2050.

2. Sustainable use of resources

We will take measures to achieve sustainable use of all resources, including depletable resources and water resources. While reducing the use of resources, we will aim to achieve zero waste through recycling and will play an active role in creating sustainable resource recycling systems for containers and packaging. We are also committed to the sustainable use of water resources.

3. Measures on preventing pollution and environmental protection

We will work to reduce our environmental impact throughout our supply chain. We will implement measures to prevent environmental pollution and will ensure the appropriate management and reduction of emissions of substances harmful to the environment.

4. Compliance with environmental laws and regulations

We will comply strictly with the environmental laws and regulations of all countries and regions where we do business, and will strive for continuous improvement.

5. Participation in environmental activities within the local community

We will play an active part in environmental activities within the community and aim to coexist in harmony with the regions where we do business.

6. Awareness and involvement in environmental protection efforts

We will work to ensure that all Group officers and employees are familiar with our environmental policy, to raise awareness of environmental protection, and to encourage all officers and employees to work together to promote and participate in activities to protect the environment.
